USING THE CISCO ANYCONNECT VPN

Make sure you are connected to the Cisco AnyConnect VPN to connect to the server from an off-campus connection.

If you haven't downloaded yet:

https://servicedesk.msstate.edu/TDClient/45/Portal/Requests/ServiceDet?ID=1025

This is the first screen you will see when you launch the Cisco AnyConnect VPN:

VPN: Ready to connect. vpn.msstate.edu Connect	•••	AnyConnect Secure Mobility Client	cisco
		VPN: Ready to connect. vpn.msstate.edu	Connect

After you hit connect, the second screen will appear:

	Login failed.			
_	Group:	Student		\$
	Username:	NetID		
	Password:	•••••		
	Duo Password	••••		
			Cancel	ОК

Replace 'NetID' with your personal NetID, input your password, and use PUSH for the Duo Password.

Authenticate with your personal device and you should be set to connect to the server from within Dreamweaver.
